The changing face of higher education.

THAT WAS THEN 1965

The typical student was ‘college-aged’ and full-time.
The federal policy architecture in support of regulation of higher education was just being established.
The Internet was two decades away.

...THIS IS NOW 2016

85% of Americans enrolled in post secondary institutions are “non-traditional” learners.¹

1/4 of US students are taking at least one online course.²

The Internet is a necessary component of our personal, educational, and professional lives.

In 2012, nearly 63% of U.S. colleges offered fully-online degree programs.³ That’s almost double what it was a decade earlier, at just 32.5%.

Nearly 70% of online education occurs within the traditional nonprofit sector.⁴

For many, the challenges of time, distance, and cost make online learning more accessible.”

It’s time for a Higher Education Act (HEA) for the 21st Century Learner.
